

SPY
CODE

Safe breaker™

SCAN SPY SOLVE

Troubleshooting :

If the coins get stuck in the safe: This can be corrected by opening the panel on the back of the vault. Remove the cylinder on the right side, this contains the coins. The vault door will now open automatically, check the back panel and the inside of the safe to find and remove any stuck coins. Replace the back panel and shut the safe door, this will reset the game. Restart the round you were playing and continue trying to crack the code!
